

Brand Voice + Website Structure Brief

Copy system, page structure and design language for the madebutter. storefront.

part bakery. part product lab.

Ridgway, Colorado

1. Purpose

This brief defines how madebutter. should sound, how the website should explain the product system and how each page should support order ahead, daily drops and community suggestions. It merges brand voice with website content structure so the site feels warm to guests and precise underneath.

Core idea: madebutter. is part bakery, part product lab. The guest should feel butter, coffee, pastry and ease. The system underneath should feel clean, data aware and reliable.

2. Current Build Snapshot

The site is live at madebutter.netlify.app and is built with React 19, Vite 6, Tailwind v4, Supabase and Netlify. The menu is dynamic through Supabase and managed in the admin. The home page, checkout flow, order confirmation, admin shell and menu management are built. Suggestions, POS, live orders, payment screen, kiosk, hero admin and about admin are planned.

Area	Built now	Planned next
Storefront	Home page, hero slideshow, about section, full menu, cart sheet, checkout and order confirmation	Suggestion form, customer payment screen, kiosk and placeholder footer pages
Admin	Secure login, dashboard shell, menu management, drag reorder, item editing, images, availability and inventory	Orders board, hero editor, about editor, POS and live order states
Content	Dynamic products with name, slug, SKU, category, description, price, image, ingredients, availability, stock and sort order	Allergen language, tags, featured status, prep family and pickup window fields

3. Brand Voice Standard

The voice should be short, clean and calm. It should feel premium without sounding expensive for no reason. It can be playful but not childish. It should not overexplain the kitchen. It should make the customer feel that the food is fresh, the packaging is travel ready and the system is dependable.

Voice rule	Use	Avoid
Simple warmth	Small batch donuts, kolaches, stuffed rolls and coffee for now, later and the road.	Sweet dreams, magic, overly emotional bakery copy
Product lab clarity	Staples stay steady. New flavors rotate through the case.	Scientific language on customer pages unless it helps
Travel ready	Made fresh, packed clean and built to travel.	Disposable sounding grab and go copy
Community welcome	Good ideas are always welcome.	Suggestion box language that feels cheap or forced
Precision	The menu shows what is ready today.	Complex kitchen statuses shown to guests

Copy rules: write lowercase madebutter. with the period. Use no em dashes. Avoid Oxford commas. Keep sentences short. Let product names and photography do most of the work.

4. Primary Copy Blocks

These copy blocks can be used across the homepage, about section, packaging, footer and order flow. They should stay close to this language unless a specific page needs a shorter version.

Part bakery. Part product lab.
madebutter. makes small batch donuts, kolaches, stuffed rolls and coffee for now, later and the road. Our staples stay steady while new flavors move through the case. Everything is made fresh, packed clean and built to feel simple, consistent, travel ready and worth coming back for. Order ahead or come on in.

Location	Copy direction
Homepage hero	Fresh today. Order ahead or come on in.
About section	Part bakery. Part product lab. A small bakery system in Ridgway, Colorado built around daily drops, steady staples and clean packaging.
Menu intro	The menu is what is good right now. Items brighten when available, dim when not today and sell out when the count reaches zero.
Suggestions page	Tell us what to make. No account needed. Good ideas may become limited drops.
Footer blurb	Small batch donuts, kolaches, stuffed rolls and coffee from Ridgway, Colorado.

5. Website Structure

The site should feel like one flowing storefront. The home page can carry the main story and menu. Dedicated pages should only exist when they improve clarity, order flow or trust.

Route	Role	Content standard
/	Primary storefront. Hero, about, full menu, cart and footer.	Food first. The hero should leave negative space for copy. Menu sections should feel like daily product bands.
/checkout/	Two step checkout. Contact first, then payment.	Fast guest checkout with email or SMS. Keep copy practical and friendly.
/order/:id/	Confirmation and receipt page.	Receipt number, order summary, customer contact and next step.
/suggest/	Community idea intake.	Open suggestion form with simple promise and optional contact.
/admin/menu/	Staff menu and inventory control.	Same design language as storefront but more precise. Touch friendly and iPad usable.
/admin/orders/	Future live order board.	Columns for New, Preparing and Ready. Clear order cards.
/admin/pos/	Future staff POS.	Counter service, order entry, payment and inventory awareness.

6. Homepage Content Flow

Section	What it does	Copy and design notes
Nav	Transparent over hero, turns white on scroll up and hides on scroll down.	Keep minimal. Home, menu, suggest, order and cart should be enough at launch.

Section	What it does	Copy and design notes
Hero slideshow	Three subtle cross fading slides with butter dot controls.	Slide 1 should sell the daily product feeling. Slide 2 can show packaging and travel ready. Slide 3 can invite suggestions.
About 50/50	Text beside packaging photo.	Use the main paragraph. Keep photo product focused and not too busy.
Sticky category rail	Donuts, Kolaches and Stuffed Rolls.	This is the menu map. It should feel touch friendly and close to the product tiles.
Menu bands	Full dynamic menu in category groups.	Five up desktop, two up mobile, near touching. Available states must be obvious.
Cart sheet	Floating cart button plus slide up cart.	Make it feel native and fast. Use product thumbnails and clean totals.
Footer	Black footer with blurb, signup, links and admin link.	Small, quiet, useful. Do not overfill it.

7. Product Content System

Each product is a rich object. The design should assume products may need name, description, price, image, ingredients, stock, availability, taxable status, allergens, tags and prep family. The current menu already supports the core fields and should be designed to grow without feeling crowded.

Field	Customer use	Staff use
Name	Product card headline and checkout line item.	Menu management and production reference.
Description	Short product explanation in a Mister Donut style.	Defines the approved customer language.
Ingredients	Simple bullet separated list.	Supports customer trust and future allergen language.
Image	Square product tile with transparent or white background.	Photo standard for product approval.
Price	Tax included customer total.	Stored as cents.
Availability	Bright, dim or sold out state.	Daily on and off control.
Stock quantity	Only N left and sold out logic.	Ready inventory count.

8. Visual Design Language

The visual system should use white, cream, black, butter yellow and very subtle matcha. The customer side should feel soft and appetizing. The staff side should use the same palette but more grids, states and data. Layout should stay at 98% width with no max width cap and remain mobile first.

Element	Direction
Color	White and black first. Butter yellow for dots, controls, active states and small highlights. Matcha only as a soft secondary category accent.
Typography	One clean family. Lowercase madebutter. Keep paragraphs short. Avoid decorative type.

Element	Direction
Images	Hero images sized for desktop, tablet and mobile with different negative space. Product images square with object contain. WebP preferred.
Tiles	Paper white backgrounds, soft shadows only when needed and clear states for available, low and sold out.
Admin	Touch friendly, iPad usable and visually related to the storefront. Staff complexity should not leak to guests.

9. Page Copy Inventory

Page or component	Needed copy
Hero slide 1	Daily product headline, one short sentence and order action.
Hero slide 2	Packaging and travel ready message.
Hero slide 3	Community suggestion invite.
About section	Final main paragraph and Ridgway line.
Menu empty state	Not available today. Check back soon.
Sold out state	Sold out today.
Low stock state	Only N left.
Suggestion page	Short intro, form labels, thank you state and staff review language.
Checkout	Contact step, notification preference, payment step and receipt language.
Order confirmation	Receipt number, next step and ready notification note.

10. Launch Content Decisions

- Finalize real prices for the seven lunch rolls before Stripe wiring.
- Finalize hero copy and two remaining hero image sets.
- Decide allergen language for the menu and product detail view.
- Decide launch pickup language. The likely start is name label shelf pickup or counter handoff.
- Finish missing product photos and keep all menu images square with transparent or white backgrounds.
- Create the suggestion page copy after the form fields are confirmed.
